4050**

The Rescue 4000 series Power Packs fit into a special part of the market—not too big, and not too small—perfectly sized for car lots, dealerships, parking lots and similar applications. Wheeled units are much easier to move if you have to cover some distance every time you need to do a jump start.

With a group 24 battery onboard, the Rescue 4000 packs serious jump start power for extended use, and it's priced right to be a great choice for automotive and light truck starting. The related model, 4050, has an onboard air compressor, so it does double duty with flat tires and low batteries.

Equipped with two 12V power outlets, polarity alarm and a digital voltmeter, the Rescue 4000 offers a lot of performance for the money. And, it's the only Rescue Power Pack that doubles as a battery charger when you set the switch to external battery.

Like all Rescue Portable Power Packs, the 4000 series features all-copper welding cables, copper clamps, and a one-year limited warranty.
